### PRODUCT DESCRIPTION

Chemtools® Rapidstick™ Retaining Compound is a high viscosity, medium strength compound with high temperature resistance for cylindrical fitting parts, particularly where bond gaps can approach 0.25mm. It develops high strength rapidly when confined in the absence of air between close fitting metal surfaces.

8620 is typically used for locating pins in radiator assemblies, retaining sleeves into pump housings, and bearings in auto transmissions.

### DIRECTIONS (READ LABEL BEFORE USE)

#### ASSEMBLY

For best results, ensure all internal and external surfaces are cleaned with a cleaning solvent prior to application. If the material is an inactive metal, or the cure speed is too slow, spray with an Activator and allow to dry.

For Slip Fitted assemblies: Apply adhesive around the leading edge of the pin and the inside of the collar, and use a rotating motion during assembly to ensure good coverage.

For Press Fitted assemblies: Apply adhesive thoroughly to both bond surfaces and assemble at high press on rates.

For Shrink Fitted assemblies: The adhesive should be coated onto the pin, and the collar then heated to create sufficient clearance for free assembly.

Parts should not be disturbed until sufficient handling strength is achieved.

#### DISASSEMBLY

Apply localized heat to the assembly to approximately 250°C. Disassemble while hot.
